

ANIMAL MOTION TOY

ABSTRACT OF THE DISCLOSURE

NOA137

5      An animal motion toy wherein a toy body modeled  
in the form of an animal has movable arm frames on both  
sides, an openable mouth portion, and a built-in sounding  
member. The arm frames are rotated by a first crankshaft  
incorporated in the toy body and the mouth portion is  
opened and closed and the sounding member makes a sound  
by a second crankshaft incorporated in the toy body.  
10      The first and second crankshafts are driven when a  
microphone provided in the toy body receives a sound  
pressure of an external signal.
